

## InnoLab C2

The InnoLab C2 is ideally suited for carrying out **practical projects in all eight surgical specialties**. The variety of models (technical simulators, organ models, animal models and human specimens) typical for these areas of expertise, which individually or in combination are required as an alternative to training on patients, can be professionally applied here using all the facilities necessary for preparation and monitoring. For larger projects requiring multiple workplaces a double surface area is available as a combination with the immediately adjacent InnoLab C1.
